SUMMARY

Full-stack developer with 3 years of experience building friendly interfaces and reliable backends using React, TypeScript, Node.js, Python, and Java. Background spans GPS/GIS data applications on an agile engineering team, a small-business website and content management system, and self-built web applications with REST APIs, SQL databases, and automated tests.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, Kotlin, SQL, HTML & CSS
Front End: React, three.js, Vite
Back End: Node.js, Express, REST APIs, JWT authentication
Databases: SQLite, PostgreSQL, MySQL, MongoDB
Tools & Practices: Git, Linux, Agile/Scrum, automated API testing, GIS/geospatial data

EXPERIENCE

Freelance Full-Stack Developer | Self-Employed, Abilene, TX | *Jun 2026 – Present*

- Build full-stack web applications, including a personal portfolio platform with a React front end, an Express REST API, SQLite, and a JWT-protected admin dashboard.

Part Business Owner (Co-Founder) | FDS Company, Brookesmith, TX | *Jan 2022 – May 2026*

- Co-founded a family business; built the company website and its content management system.
- Managed the website's software and GPX coordinate data.

Software Engineer Intern | Kaart, Grand Junction, CO | *Jul 2019 – Aug 2022*

- Built React front-end components using contextual state and events as part of an agile software engineering team.
- Programmed GPS processing applications with React, Java, and Kotlin, working with GPS coordinates and GIS data extracted from still images.
- Collaborated with a team of five to build an internal GIS quality-control tool that validates map data.
- Contributed to a full-stack web application similar to Mapillary; created APIs and worked on database design with PostgreSQL and MySQL.
- Resolved a product issue through consumer testing.

Desktop Support Specialist | Contract Professionals, Inc., Livermore, CA | *2017 – 2018*

- Analyzed computer operations and troubleshot hardware and software issues.

PROJECTS

farrisbilly.com Portfolio Platform | React, Express, SQLite, JWT | *github.com/FarieBerrie/Portfolio*

- Developed a React single-page app backed by an Express REST API and SQLite, with a JWT-protected admin dashboard, server-side validation, a rate-limited contact form, and an automated API test suite.

Mutant 64 (Lead Developer, 2026) | JavaScript, three.js, Vite, Web Audio API | *mutant-98xt.onrender.com*

- Led development of a 64-bit-style 3D browser action game with every asset generated in code: low-poly characters, textures painted at load time, a hand-made bitmap font, and music and sound synthesized live with the Web Audio API.
- Implemented a fixed 60-step simulation with interpolated rendering. Source: github.com/FarieBerrie/mutant

Flow Field Kaleidoscope | *farrisbilly.com/flowfield*

- Built an interactive generative-art canvas with color palettes, symmetry/kaleidoscope controls, drag-to-paint, and PNG export.

EDUCATION

Computer Science Coursework | Colorado Mesa University, Grand Junction, CO | *2018 – 2022*
